Installation

The peeler must be installed on a level, non-skid work surface. During peeling operation food product must be wet. By means of a 3/4" pipe bring water to feeding nipple. As an alternative it is possible to place the machine below a 3/4" water faucet and let the water flow in during the operation. It is recommended to place the machine near by a water sink to allow wastes to flow out. A drainage pipe may be connected to outlet waste to flow the wastes out to the nearest sink.

Operation

PRE OPERATION

- Check voltage of the machine. The voltage must be the same as the power source voltage.
- Grounding wire must always be connected.
- Check if the machine is firm in its position. Be sure the water inlet pipe and the drainage pipe are installed properly.

OPERATION

IMPORTANT: BE SURE THE ABRASIVE PLATE IS FIRMLY FITTED ONTO CENTRAL SHAFT PIN.

First of all check if the lid is duly fitted on the top of the machine. To start machine turn switch to ON position. Let water flows into the chamber and load it with food product. Water shall then flow out through the waste outlet. Each load shall not exceed 10 Kg in the Peeler. The peeling time is from 3 to 5 minutes it depends on the hardness of the food product, its size and irregularity.

Check if products are peeled looking through the transparent lid. To remove peeled product from inside the chamber close faucet, place a container under the discharge door and open it, so that the peeled potatoes are

Operation

discharged from the chamber under the action of centrifugal force applied by the peeling disc.

IMPORTANT

Under no circumstances touch the Abrasive Disc when it is in moving. Secure the lid, open the water tap, set the timer and activate the ON/OFF switch. With the machine on and with water falling at the center of the abrasive disc, pour the product to be processed inside it. For the PE-BR-0010, put 10 Kg of potatoes at most. The working time varies from one to five minutes. If the potatoes are being peeled to irregularly, it is possible to observe the process through the lid opening. The PE-BR-0010 is designed to process normal shaped potatoes, any other vegetable with irregular shape will need a manual finishing even after processing. To remove the peeled product, keep the machine running, shut down the water and open the Door by pulling the lock upwards. Lift it until the side lock and keep the door open. This way the product will be expelled. To close the door, release the side lock by pulling it sideways.

Maintenance

CLEANING

1. Turn OFF the machine and disconnect it from power source.
2. Wait until the abrasive plate is completely still.
3. To lift the abrasive plate out of the cylinder, hold it and pull it up.
4. Wash the machine and the plate with water and neutral soap.
5. To reassemble plate proceed inversely being sure of placing it back on the central shaft pin correctly.

For a fast cleaning, just turn the machine ON without load and let it work with running water.
