## Installation

### IMPORTANT!!! PLEASE READ BEFORE INSTALLATION

- If the unit has recently been transported, please let the unit stand upright for a minimum of 24 hours before plugging it in.
- Make sure that the unit drops down to the desired temperature before loading the unit with product.
- Make sure that there is proper ventilation around the unit in the area where it will operate.

# Installation

---

- Make sure all accessories are installed (shelves, casters, ect.) before plugging in the unit.
- Please read through the manual in its entirety.

## CABINET LOCATION GUIDELINES

### INSTALL THE UNIT ON A STRONG AND LEVELED SURFACE

- Unit may make unpleasant noises if surface is uneven.
- Unit may malfunction if surface is uneven.

### INSTALL THE UNIT IN **AN** INDOOR, WELL VENTILATED AREA

- Unit performs more efficiently in a well ventilated area.
- For best performance, please maintain a clearance of 4" from the back of the unit.
- Not to be used outdoors.

### AVOID INSTALLATION IN A HIGH HUMIDITY AND/OR DUSTY AREA

- Humidity can cause the unit to rust and decrease efficiency of the unit.
- Dust collected on the condenser coil will cause the unit to malfunction. Clean the condenser at least once a month with a brush or clean cloth.

### SELECT A LOCATION AWAY FROM HEAT AND MOISTURE-GENERATING EQUIPMENT

- High ambient temperatures will cause the compressor to overwork, leading to higher energy bills and gradual breakdown of the unit.

## ELECTRICAL

Please ensure that the required voltage of the compressor is being supplied at all times. Low or high voltage can detrimentally affect the refrigeration unit. All units should be plugged into a grounded a properly-sized electrical outlet with appropriate overcurrent protection. Please refer to the electrical requirements on the rating plate. Please make sure that your unit has its own dedicated outlet. Do not use [an](#) extension cord.

# Maintenance

---

## CLEANING THE CONDENSER COIL

- For efficient operation, it is important that the condenser surface be kept free of dust, dirt and lint.
- We recommend cleaning the condenser coil and fins at least once per month.
- Clean with a commercial condenser coil cleaner. Brush the condenser fins from top to bottom, not side to side.
- After cleaning, straighten any bent condenser fins with a fin comb.

# Maintenance

---

## CLEANING THE FAN BLADES AND MOTOR

If necessary, clean the fan blades and motor with a soft cloth. If it is necessary to wash the fan blades, cover the fan motor to prevent moisture damage.

## CLEANING THE INTERIOR OF THE UNIT

- When cleaning the cabinet interior, use a solvent of warm water and mild soap.
- Do not use steel wool, caustic soap, abrasive cleaners, or bleach that may damage the stainless steel surface.
- Wash door gaskets on a regular basis, preferably weekly. Simply remove door gasket from the frame of the door, soak in warm water and soap for thirty (30) minutes, dry with a soft cloth and replace.
- Check door gaskets for proper seal after they are replaced.
- Periodically remove the shelves and pilasters from the unit and clean them with mild soap and warm water. To remove the pilasters, first remove the shelves and shelf brackets. Then, simply lift the pilaster up and out.

**Warning: Disconnect power cord before cleaning any parts of the unit.**
