The device is for professional use and should be used by qualified personnel.

Before starting any operation, please see these instructions. Carefully keep available near the rotisserie.

The upgrading of premises are at users expense.

Every cooking appliance generates heat and particles of fat.
The unit should be installed in accordance within norm's and regulations in force in a well-ventilated area. With sufficient mechanical extraction and fire prevention. Would recommend that you call upon a qualified company for the work to be done according to the local norm's extraction, gas connection, building work.

We recommend that you call upon a qualified installer for the connection of the unit to the gas and electrical supplies.

Interventions on the electrical parts must be performed by qualified personnel accordance with the standards.

The company is not liable for damages if:
Å improper use of the device
Å non-compliance with standards
Å incorrect installation
Å non compliance with guidance on maintenance
Å unauthorized modification
Å installation of non-original spare parts
Å installation and use of the rotisserie different than those provided by the mnufacturer

The plate is located on the back right in the middle of the amount.

1.2. TRADEMARK, MODEL, REFERENCE

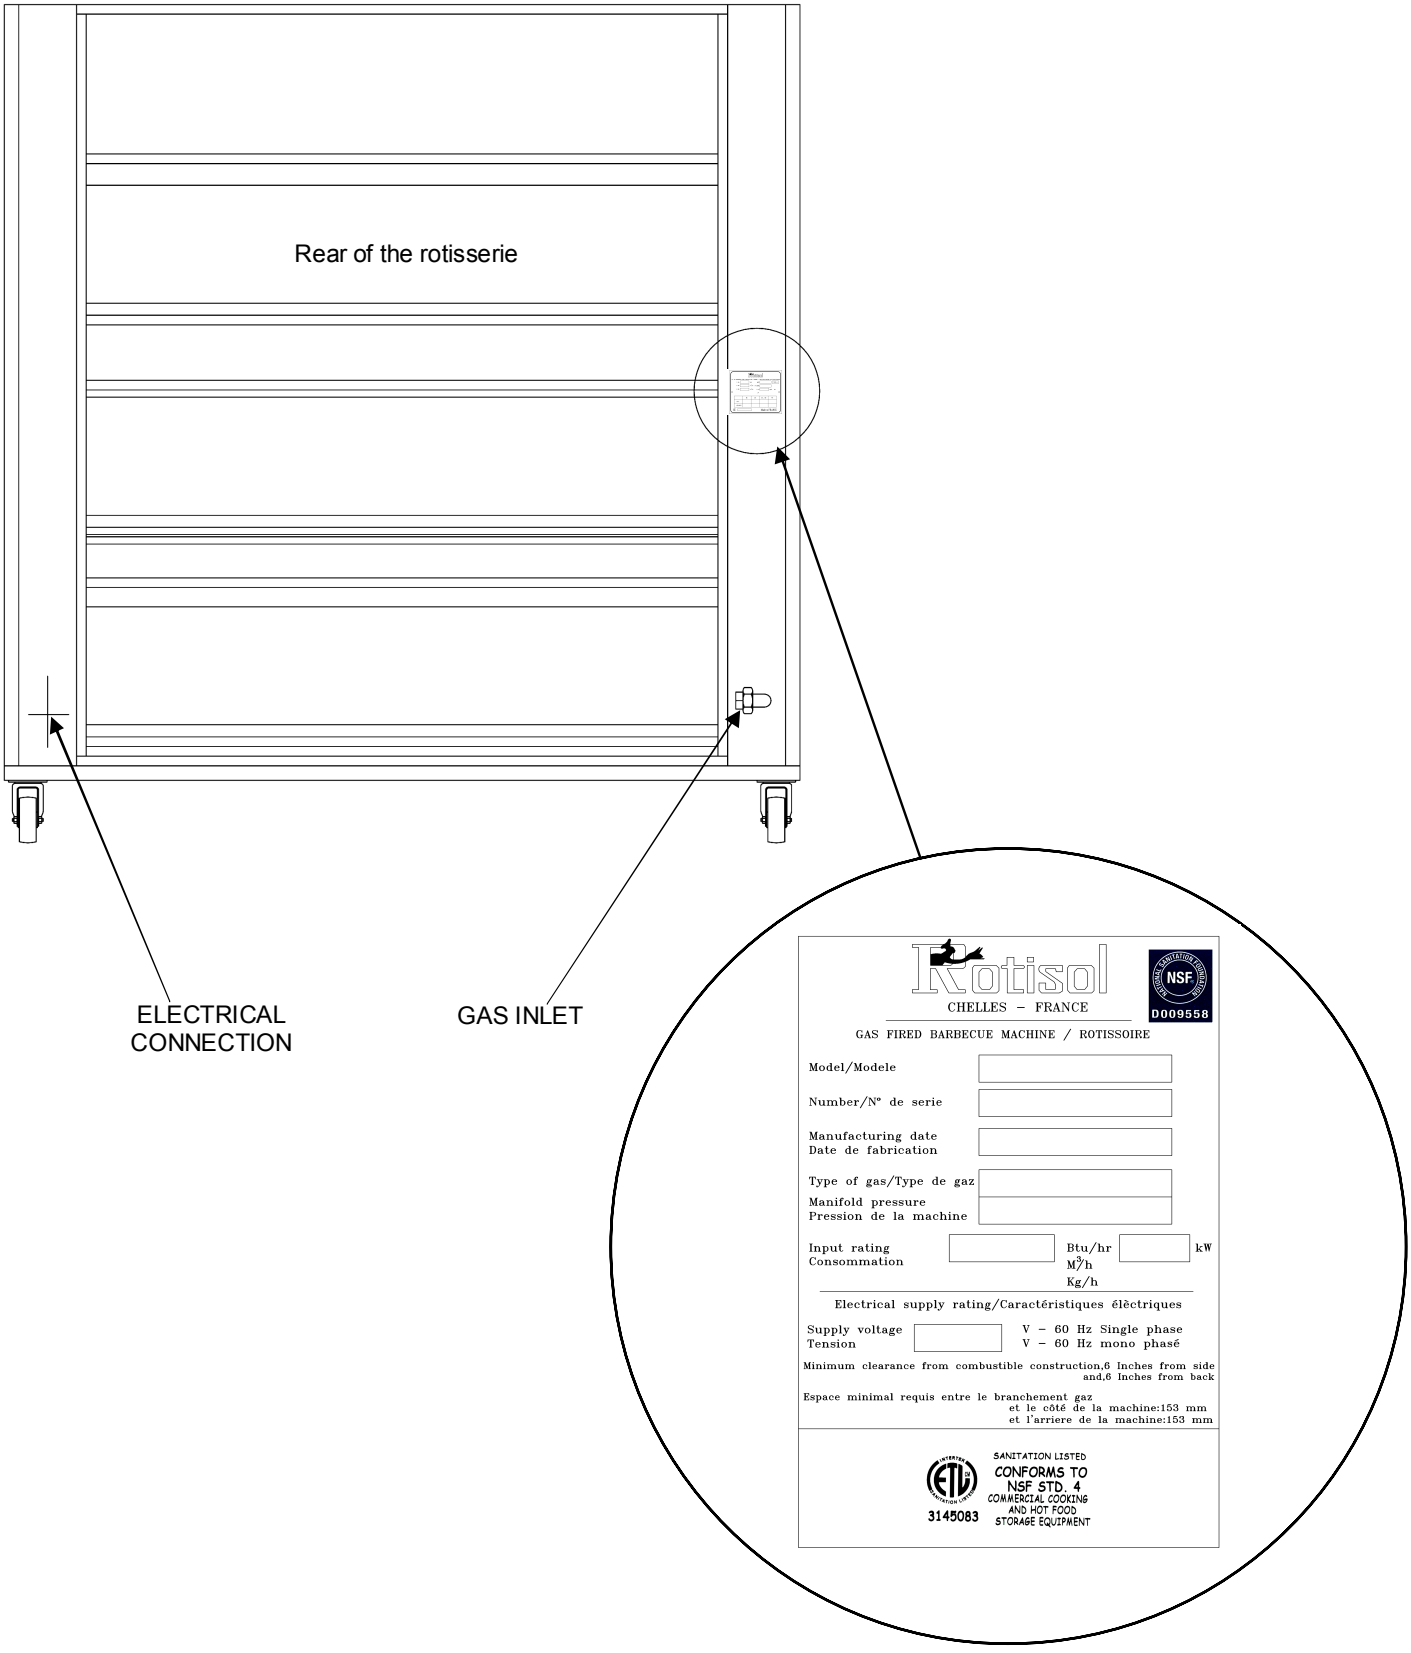
1.3. SITE OF MANUFACTURERS PLATE

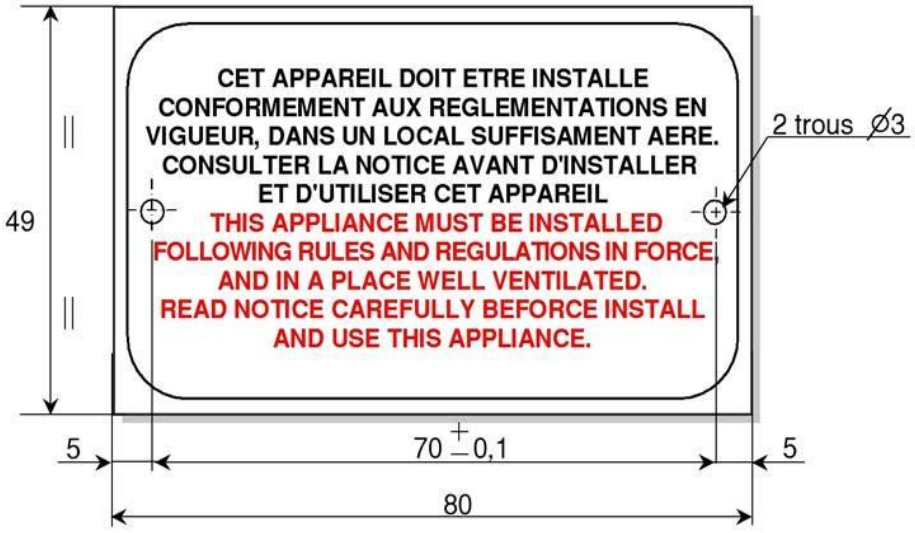
It is situated on the rear, right hand side of the unit.



1.4. COMPULSORY MARKINGS

1.4.1. ON THE ROTISSERIE AND ON THE PACKING

STUCK ON THE PACKING AND ON THE FRONT ON THE UNIT



STUCK ON THE BACK AT THE ABOVE THE GAS INLET

2. SETTING UP UNIT AND STARTING UP

Å Before connecting and starting up the rotisserie. Ensure that the gas and electrical connections are present.
This work are at the client cost, that he needs to have done by are a agreed company, near the position that the rotisserie is to be les faire exécuter, par des sociétés.

The new air flow require for the combustion is : 2 m^3/h par kW of the calorifique flow.

2.1. SETTING UP

2.1.1. UNPACKING

Unpack the rotisserie that is circled, filmed and fixed on palette.

2.1.2. *INSTALLING THE UNIT NEXT TO WALLS AND APPLIANCES*

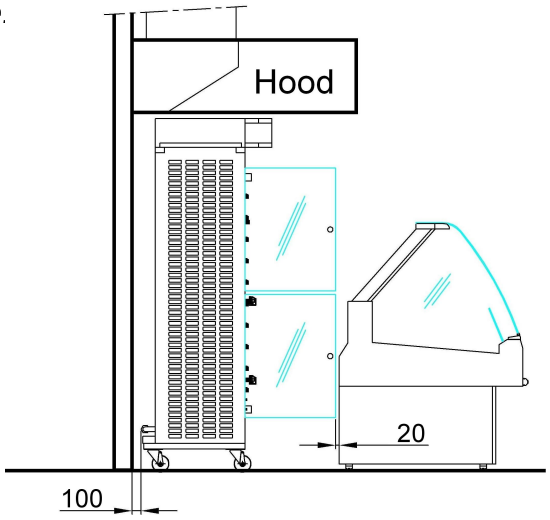
The unit with glace door open should be placed at a distance minimum of 20mm to adjacent walls.

2.1.3. *APPLIANCE EQUIPPED WITH WHEELS*
The device must be placed on a perfectly level ground and locked in a stationary position for use and et le stockage.

2.1.4. *ENVIRONNEMENT*

The device should not be installed near the steam,grease (frying,é), projections of water, high températures or other adverse condition.

INDOOR INSTALLATION
OR OPEN KITCHEN



2.2. GAS CONNECTION

The gas supply pipe will be sized to minimize losses power. Itôs diameter will be determined in function to itôs route (length, number of bends etc...) and the total power rating of the unit.

« Check that the settings of the unit corespond to the nature and preassure of the gas at the premises.

In order to check the pressure of the unit, you just need to attached a manometer to the water gage at the gas inlet on the rear of the unit, with all the burners on full.

The pressure measured should be the same as that indicated on the gas label, stuck to the unit.

The gas supply valves require no rotisserie set-up during their lifetime.

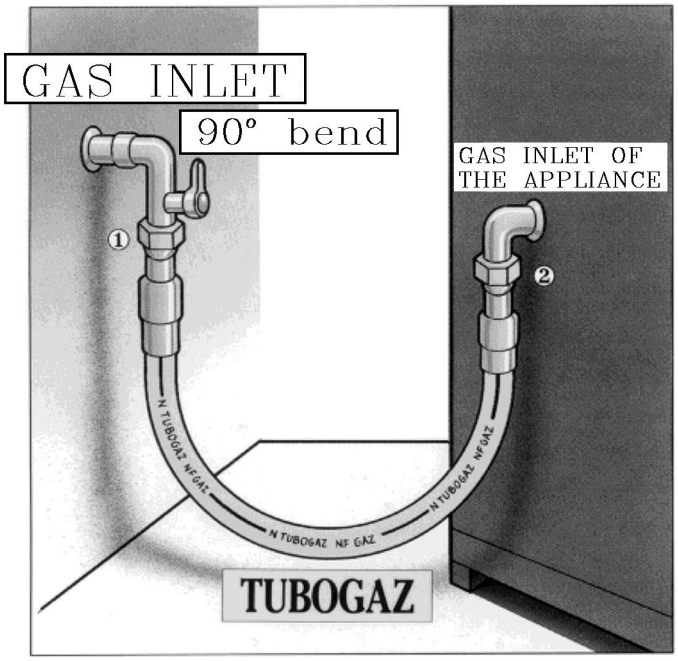
FIXED



Connection type union 1 or 2

The use of **TURBOGAS** or **similar** in professional fixed instalations,willpermit a total liberty in the conception of the kitchen.

MOBILE

The conception of a kitchen with mobile gas appliance is possible thanks to a tamdem of TURBOGAZ - TUSHGAS or SIMILAR.

2.3. ELECTRICAL CONNECTION

Check that there is no errors with **CONNECTION.**

- Å Electrical rating : 230V~50Hz.
- Å Check that the installed power corresponds with the characteristics on the signal plate at the rear of the unit.

IN ALL CASES , CONNECT THE EARTH WIRE

THE UNIT IS DELIVERED IN MONOPHASE + EARTH

2.4. EVACUATION - SMOKE TYPE : A

- Å The unit is destined to be installed under an extraction system with ventilation
- Å A heat delector with holes is placed above the rotisserie

CHANGE OF INJECTOR AND ADJUSTMENT OF THE PRIMARY AIR

- Remove the outer panel left

- With a 23 key loosen the nut on the valve supply pipe gas burner.

- With a wrench 19 to loosen the nut 90 ° elbow on the gas supply pipe by blocking the 90 ° elbow with a wrench 17.
- Turn the gas supply pipe up.

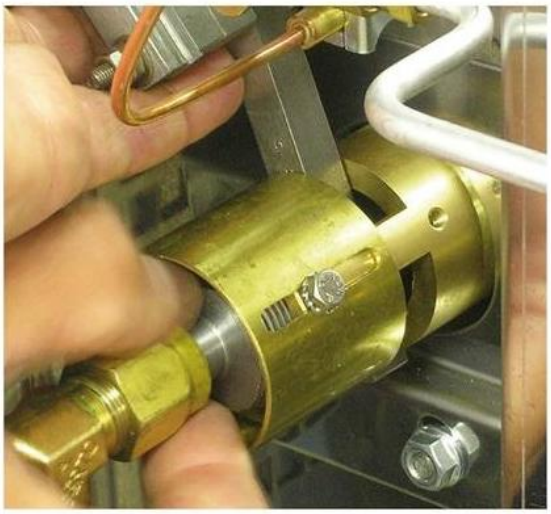
- Remove all 90 ° elbow, injector holder and injector by unscrewing the set completely.

- Unscrew the injector with a wrench de17 blocking the injector holder with a wrench 24.

- Tighten but without forcing the new injector on the injector holder.

- Refit the 90 ° elbow, injector holder and injector.

- Using a wrench 7, loosen the screw holding the ring of air and pull back out.



- Using a wedge, adjust the position of the injector to the coast of 9.5 compared to the inside of the air intake sleeve (see instructions installer, chapter position of the injector and setting ring of the primary air).

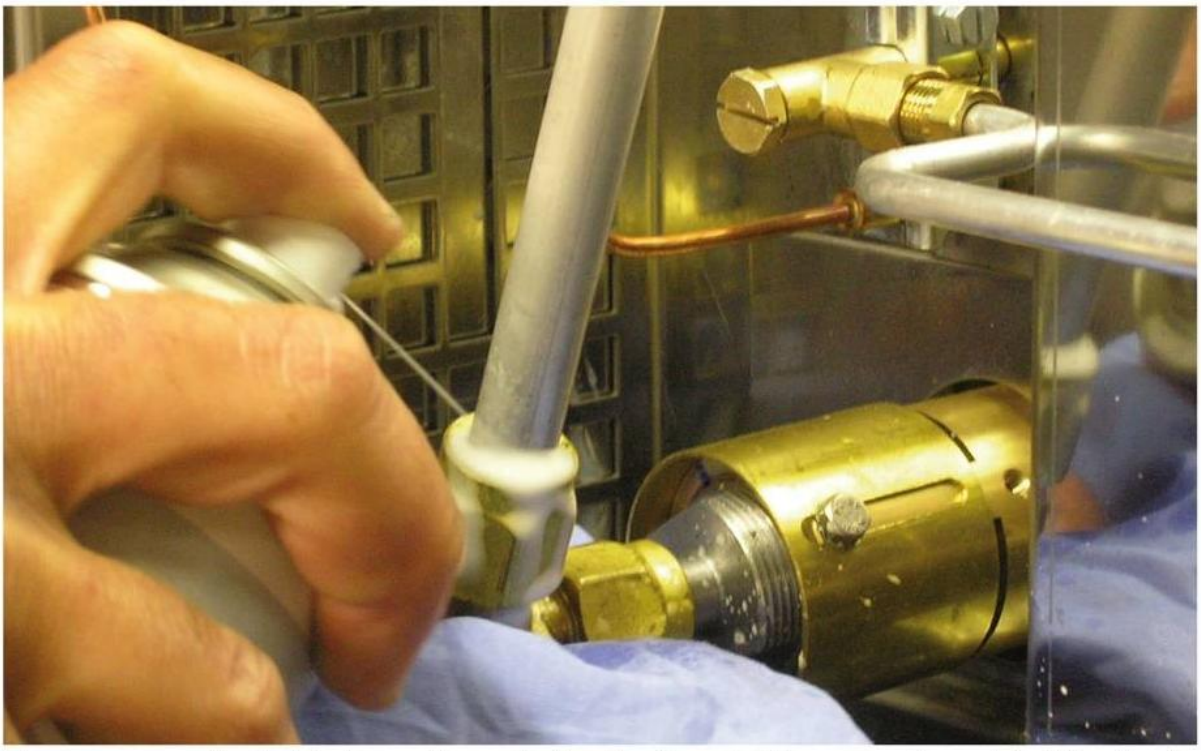
- Using the keys used during disassembly reposition the gas supply pipe.

- Using a wedge to adjust dimension "D" position of the ring of air over the inner sleeve of the air intake (see Table installer instructions "setting a burner") .

- Block the air ring with the wrench 7.
- Make a complete leak test gas circuit.
- Replace the outer panel.

CONTROL CIRCUIT GAS SEAL WITH A SPRAY DETECTOR GAS LEAK.

- Remove the outer panel left.
- Connect to the network rotisserie gas.
- Light the burners.



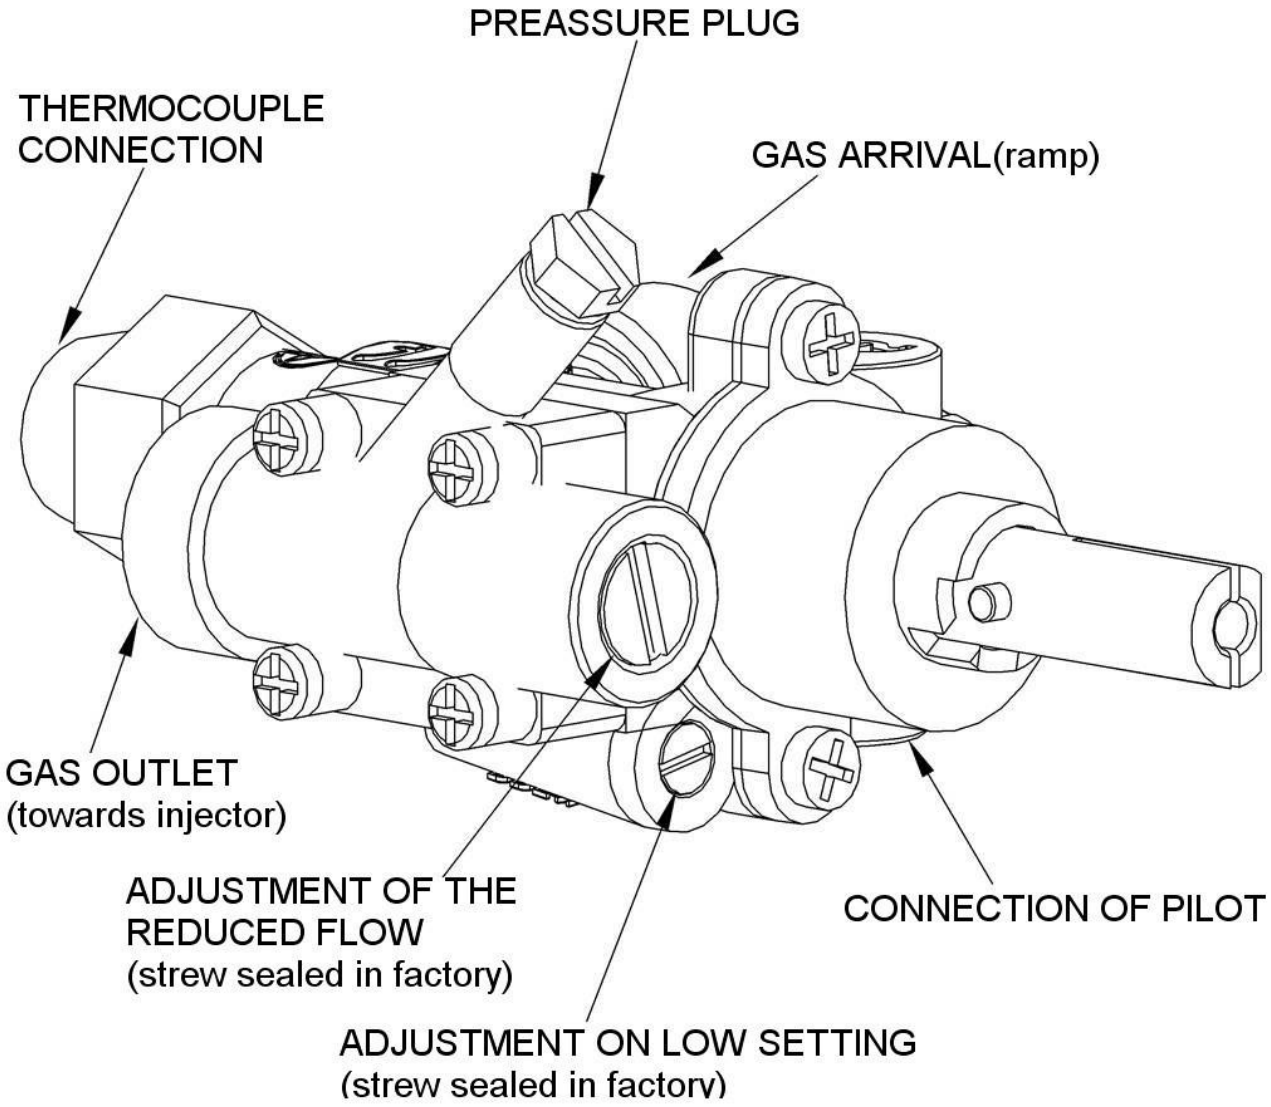
- Using a spray can "leak detector gas" spray in the direction of all the connection point of the circuit gas.

- If there is rapid formation and / or bursting of large bubbles, review the application and assembly of components for connecting the gas line.
- Repeat until the complete elimination of bubbles.
- Turn off burner.
- Replace the outer panel left.

3.4. LABEL SET

The label specifying the setting of gas to the appliance must be attached to it (see mandatory, chapter 1.4.1.). In case of change of gas, the new label comes with the new injectors.

3.5. ADJUSTEMENT OF THE REDUCE FLOW



3.5.1. ADJUSTMENT OF REDUCED FLOW

Connect a manometeron the pressure plug and adjust to the pressure required (see table of : categuories of gas, chapter 3.1.1) with the aide of the reduced flow screw:

SEAL THE ADJUSTMENT.

3.5.2. *ADJUSTMENT OF LOW SETTING*

Put the tap to the « minimum » setting.
Connect a manometer on the preassure plug and adjust the pressure to that require (see table for adjustment of burner, chapter 3.7) with the aide of the low setting screw.

SEAL THE ADJUSTMENT
